

Project **e-Shishu**

The golden words of  
Sarva Shiksha  
Abhiyan  
is to get all the  
out of school children  
of our country  
into the school  
by  
2010

Project e-shishu

# Prelude...

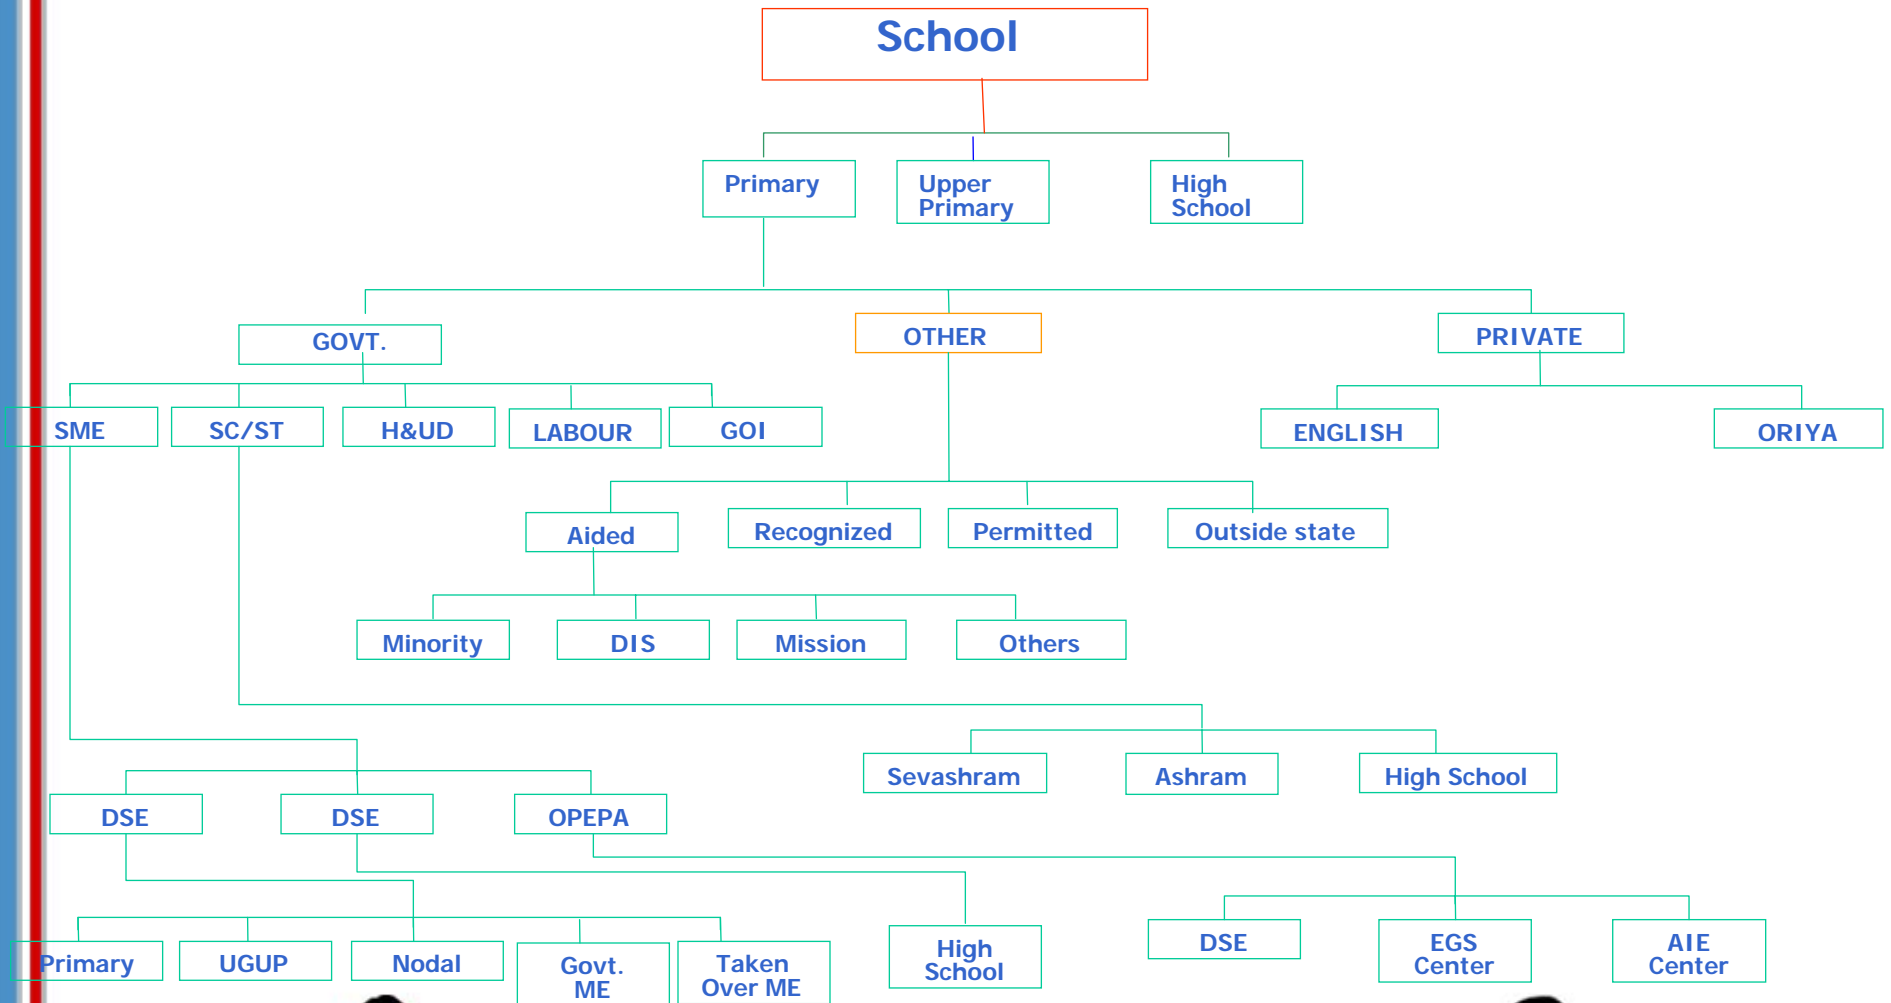

Education is a multipurpose process, which not only inculcates social, economic and cultural awareness in humanity, but is also an important medium for grasping and promoting life enhancing values among human beings. It awakens the potential among people so that they are able to recognize truth, beauty and goodness. Value Education propels mind and soul towards achieving equilibrium which enhances the personality and promotes mental and spiritual strength as well as clarity and resolution in one's aims. Actually, education is an ever continuing and open ended process and its true objective is to civilize humankind.

Right to free and compulsory elementary education is now a fundamental right for every child in the age group of 6-14 years. Govt. of India in collaboration with State Govts have embarked upon an ambitious programme of Sarva Shiksha Abhiyan.

Are we achieving the goal...? Let's Explore....

# Schools in Orissa

# Teachers in Orissa

There are roughly 1lakh and 4 thousand government teachers in the state under S&ME department.

And say another 40 thousand Para teachers and Swetcha Sevi Shiksha Sahayak (SSS) supporting the education program for elementary education in the state.

## paradoxically

These teachers are monitored by the Government through the above shown hierarchical structure of the schools.

There is a huge **gap** between the Government's intention and the motivation of the teachers to achieve the target of SSA

# Children in Orissa

It is estimated that the Orissa child population is around 1 crore (0-14 years).

## Statistically

**A.** Every year OPEPA draws physical and financial milestones in the year beginning to bring in all out of school children to the school.

**B.** With the statistical data of the child population; budget is prepared to make provisions of new schools, Bridge Courses, EGS Centers, pedagogy improvement, girls education, special attention to disabled and many more activities.

But...all the planning depends on the Authentic Child population in the state which could be accessed and updated in real time at the Districts, blocks, Gram-panchayat and village level.

**Unless we have information of each child with name, Guardian name, district, block/ULB, GP/Ward & Village where he/she resides with additional information on physical status, educational status, community etc...the dream of making the Sarva Shiksha Abhiyan a success is impossible.....**

## e-Governance for Education system

e-Governance initiatives, traces, points and fills out the lacunae of the previous processes of elementary education by way of:

- Universal enrolment
- Universal retention &
- Universal achievement

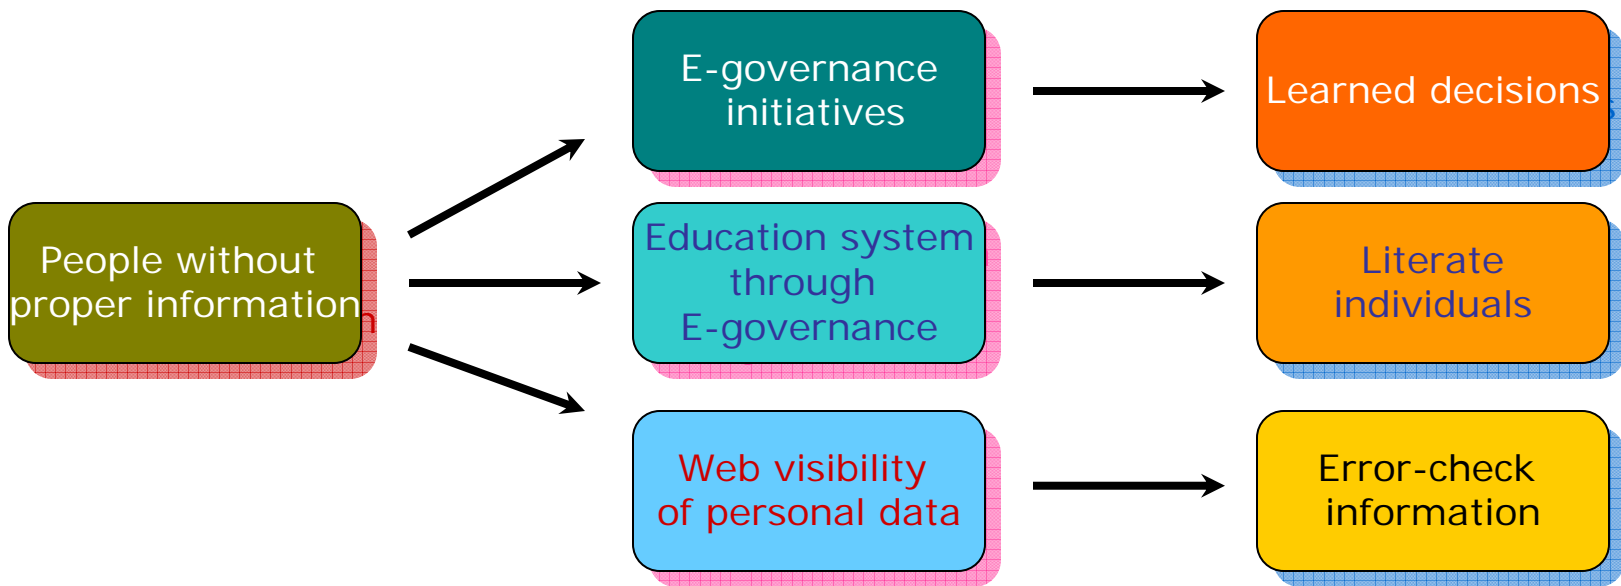

# Importance to Government

# Citizen Centricity

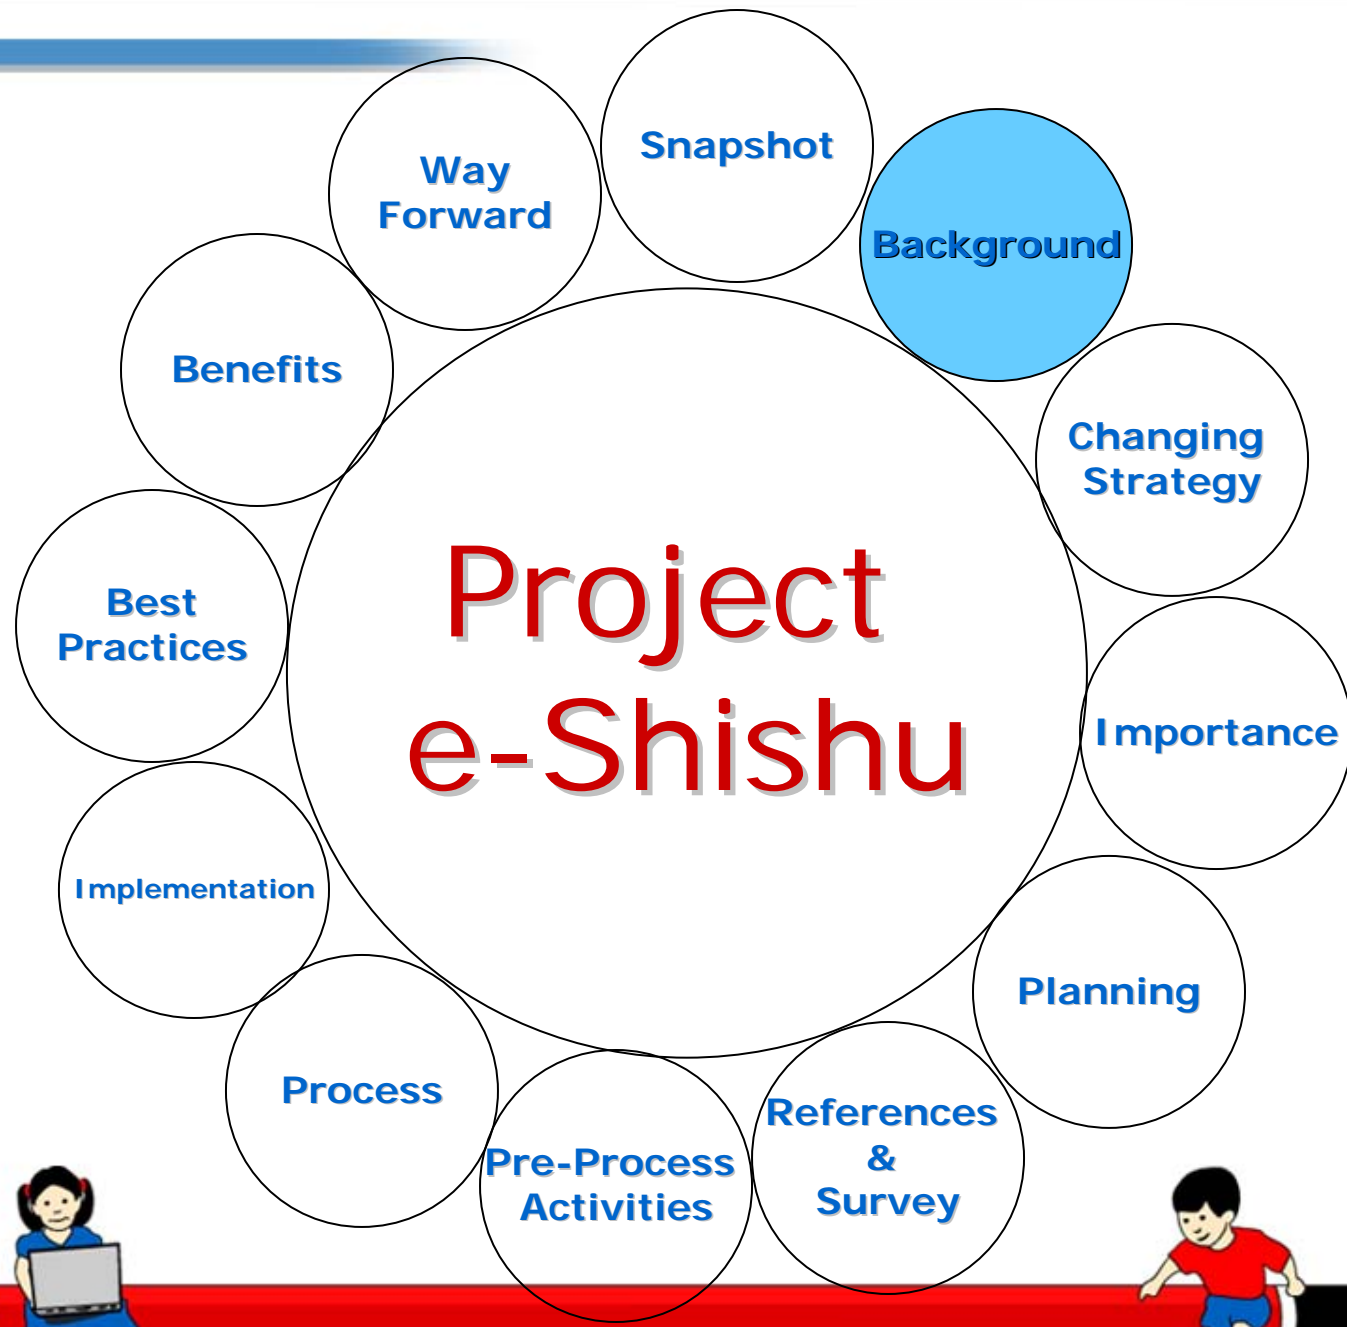

e-Governance initiatives bridges the digital divide between the citizens and their own information by bringing transparency of records

Project **e-Shishu**

# Project e-Shishu

Project e-Shishu

# Background...

- SSA

- The Sarva Shiksha Abhiyan has been a historic stride towards achieving the long cherished goal of Universalization of Elementary Education (UEE) through a time bound integrated approach. SSA promises to change the face of the elementary education sector of the country, aims to provide useful and quality elementary education of 8 years to all children in the 6 -14 age group by 2010.

- Objectives

- All children in school, Education Guarantee Scheme Centres, Alternate & Innovative Education Centres, ' to School' camp by 2005;
- All children complete five years of primary schooling by 2007;
- All children complete eight years of schooling by 2010;
- Focus on elementary education of satisfactory quality with emphasis on education for life;
- Bridge all gender and social category gaps at primary stage by 2007 and at elementary education level by 2010;
- Universal retention by 2010.

- **Areas of Concern**

- Large unevenness of achievements.
- Huge gaps remain between rural and urban areas, and the probability of getting any education at all sharply depends on gender, caste and income.
- Women, Scheduled Castes and Tribes and the poor are faced with formidable barriers when it comes to getting basic education.
- Apart from socio-economic determinants, the educational infrastructure and the management and the governance of the educational system falls short of being the largest provider of education in India.
- Though the number of primary schools in the country has increased substantially, more than one lakh habitations still do not have access to a primary school within a distance of one kilometer.
- Teacher-pupil ratios are inadequate: Less than 2 teachers are available in the rural areas to teach a class size of around 100 students.
- Fewer girls attend school in the rural areas compared to their urban counterparts, and also compared to boys in the rural areas.

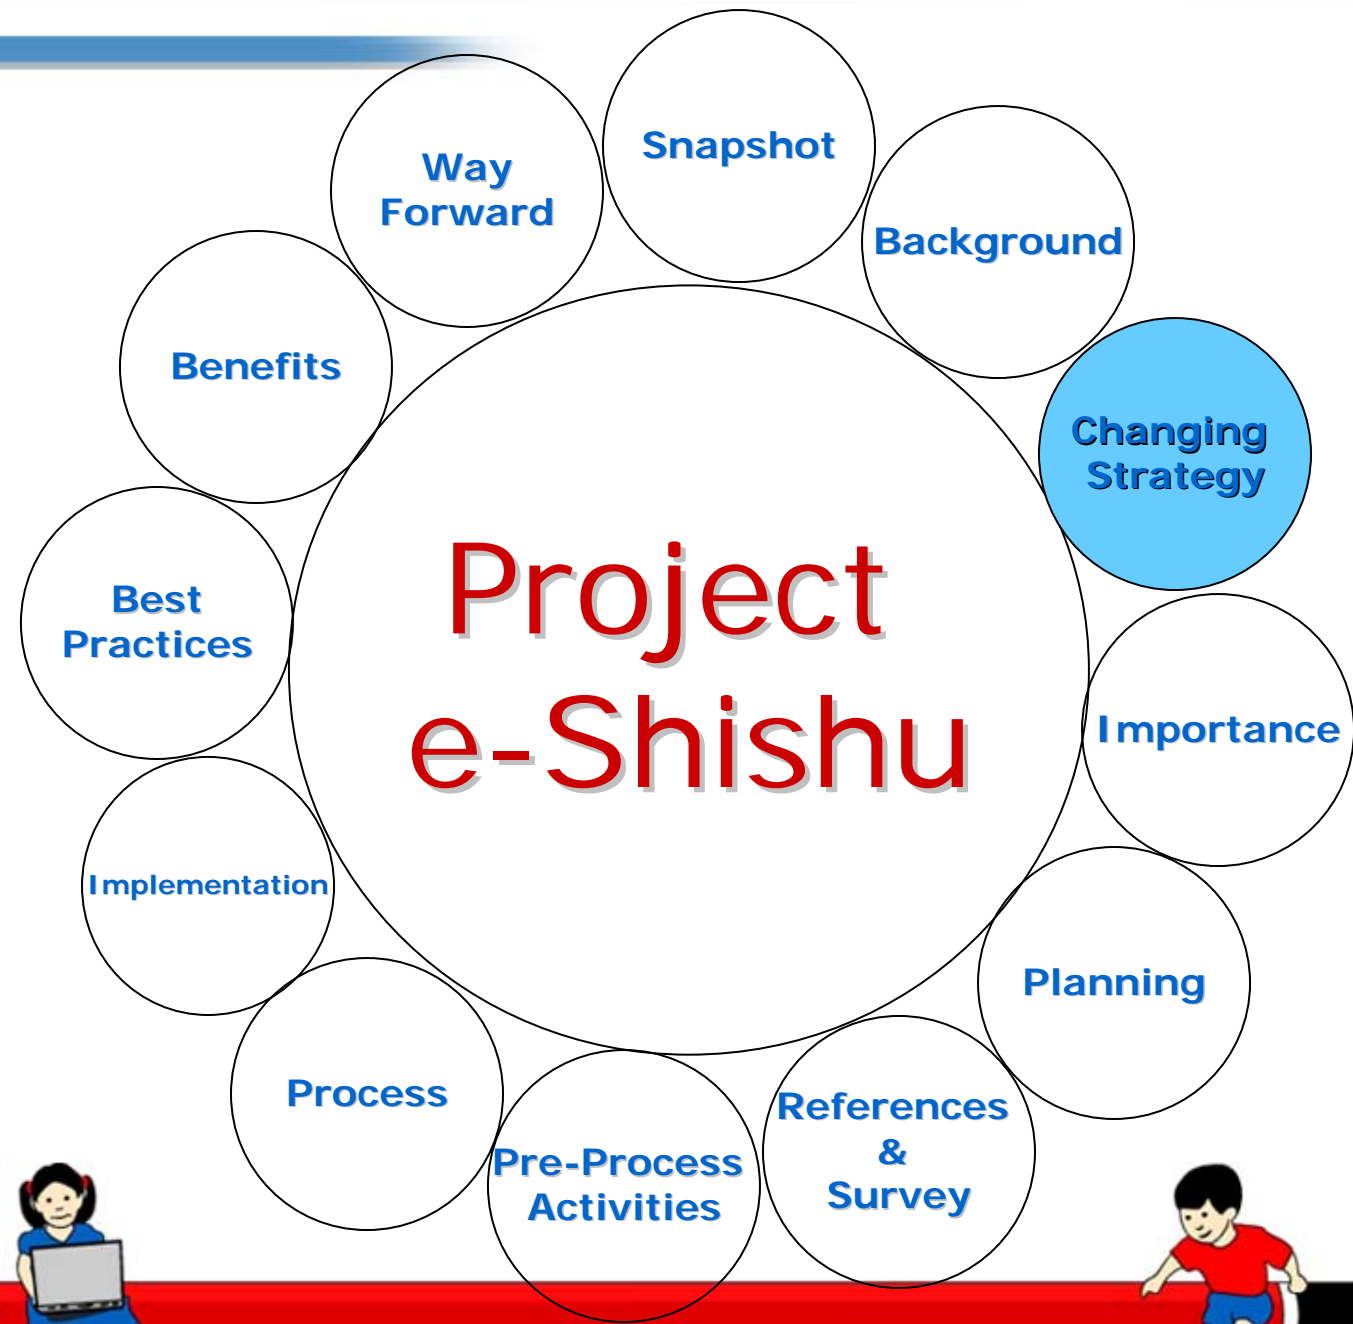

**Where is the Problem?**

- Till date OPEPA does not have a comprehensive village wise list of the children names who are out of school.
- There is the problem of duplication of enrolment in Govt. institutions due to several incentives like Books, MDM, Uniforms etc..
- Information on infrastructure of schools, teachers posting etc is hard to get from remote locations.
- Also there is no system to get information on Future entrants to the education system.
- Though the information on out of school is generated from the data collected but this is only in numbers. And there is no solid information on the details of the children who are out of school.

# Project e-Shishu

Project e-Shishu

# Changing Strategy

- New Requirements

- To have a comprehensive data base of children from 0-14 years..
- To track the birth of every child so as to have a projection.
- To estimate the volume of children- enrolled/ never enrolled/ dropout with different caste/gender/age.
- Demographic and geographic profile of every child, whether studying or out of school and reasons for the later.
- To attain 100 percent accuracy of data collected, where human intervention can be minimized, reducing chances of error.
- To get information on the infrastructure of Schools and institutions so that proper action can be taken.
- To get information on the teachers in the entire state.
- To provide better infrastructure in the state as well as District offices for faster retrieval of data and updation.

## • Emergence of Project e-Shishu

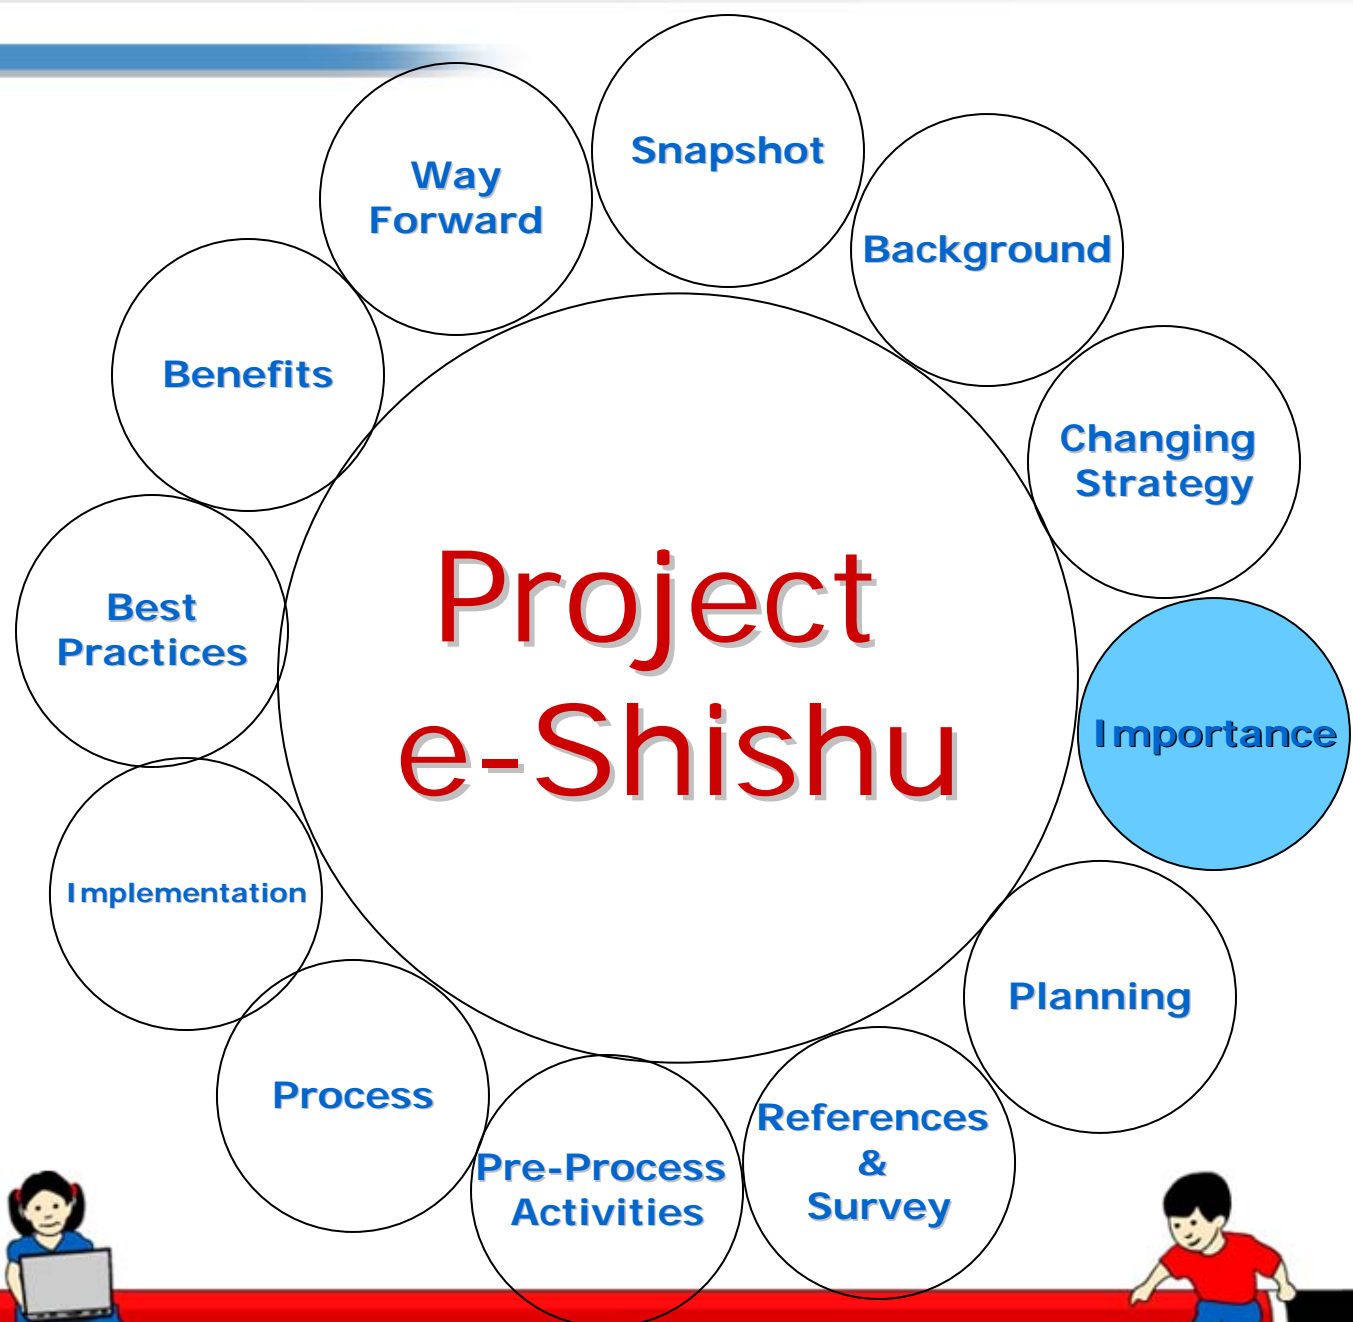

- To have a comprehensive data base of children from 0-14 years, OPEPA required to conduct a child census- 2005, from 1st-10th October 2005. The "ORISSA CHILD CENSUS 2005" would cover each & every household of the state. A database of all the children of 0-14years, with their name, age, sex, caste, educational status and the reasons for out of school has to be built up, using the ICR (Intelligent Character Recognition) technology.

For school and Teachers, two sub-projects are also included in the project:

- **Orissa GIS School Mapping Project-2006 .**
  - **Orissa Education Personnel Information Project -2006 .**
- With the data collected and stored into the database, **a Child Tracking System (CTS)** was required to be developed for generating different kind of statistical report as well as to track down child by her/his name or guardian name. The district programmers could update the child, School as well as the House hold data at the district office and the data could be consolidated in a centralized server at the state office. This information would be made available in the website for the public viewing where the latter can not only track particular child information but also can suggest changes on the particular information.

# Project e-Shishu

Project e-Shishu

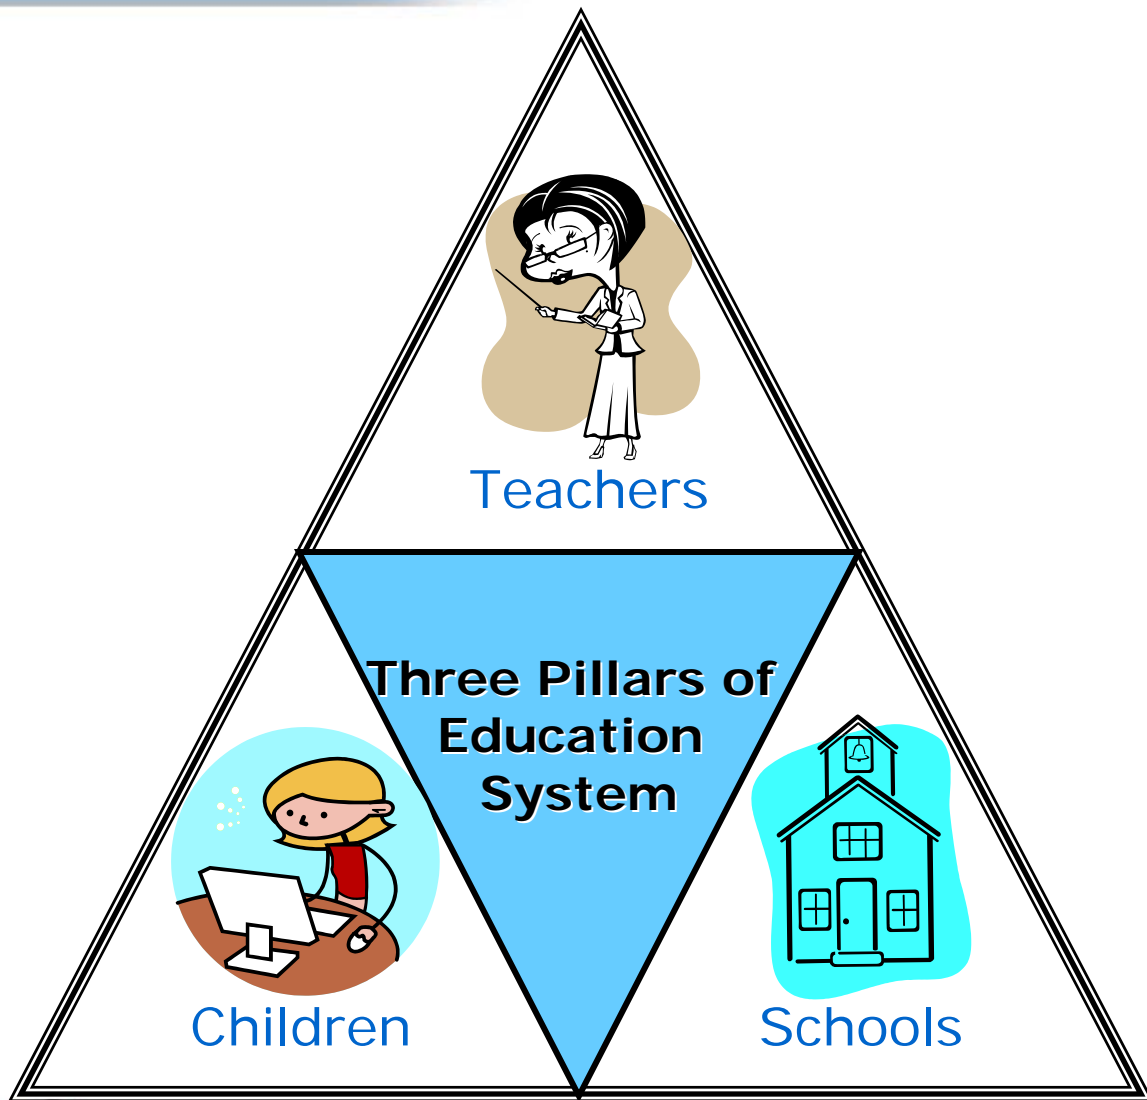

# Importance of the Project...

- Objective

- To have a comprehensive and authentic database of children from 0-14 yrs with name, guardian name, date of birth, sex, religion, category, school where studying, if out of school then reasons for it, mother tongue, with special needs etc. of the entire state of ORISSA.
- To map all the schools using GPS survey for getting information on the infrastructure.
- To get information about teacher details, their posting etc.
- Linking of Infrastructure and teachers position to each and every school apart from students.

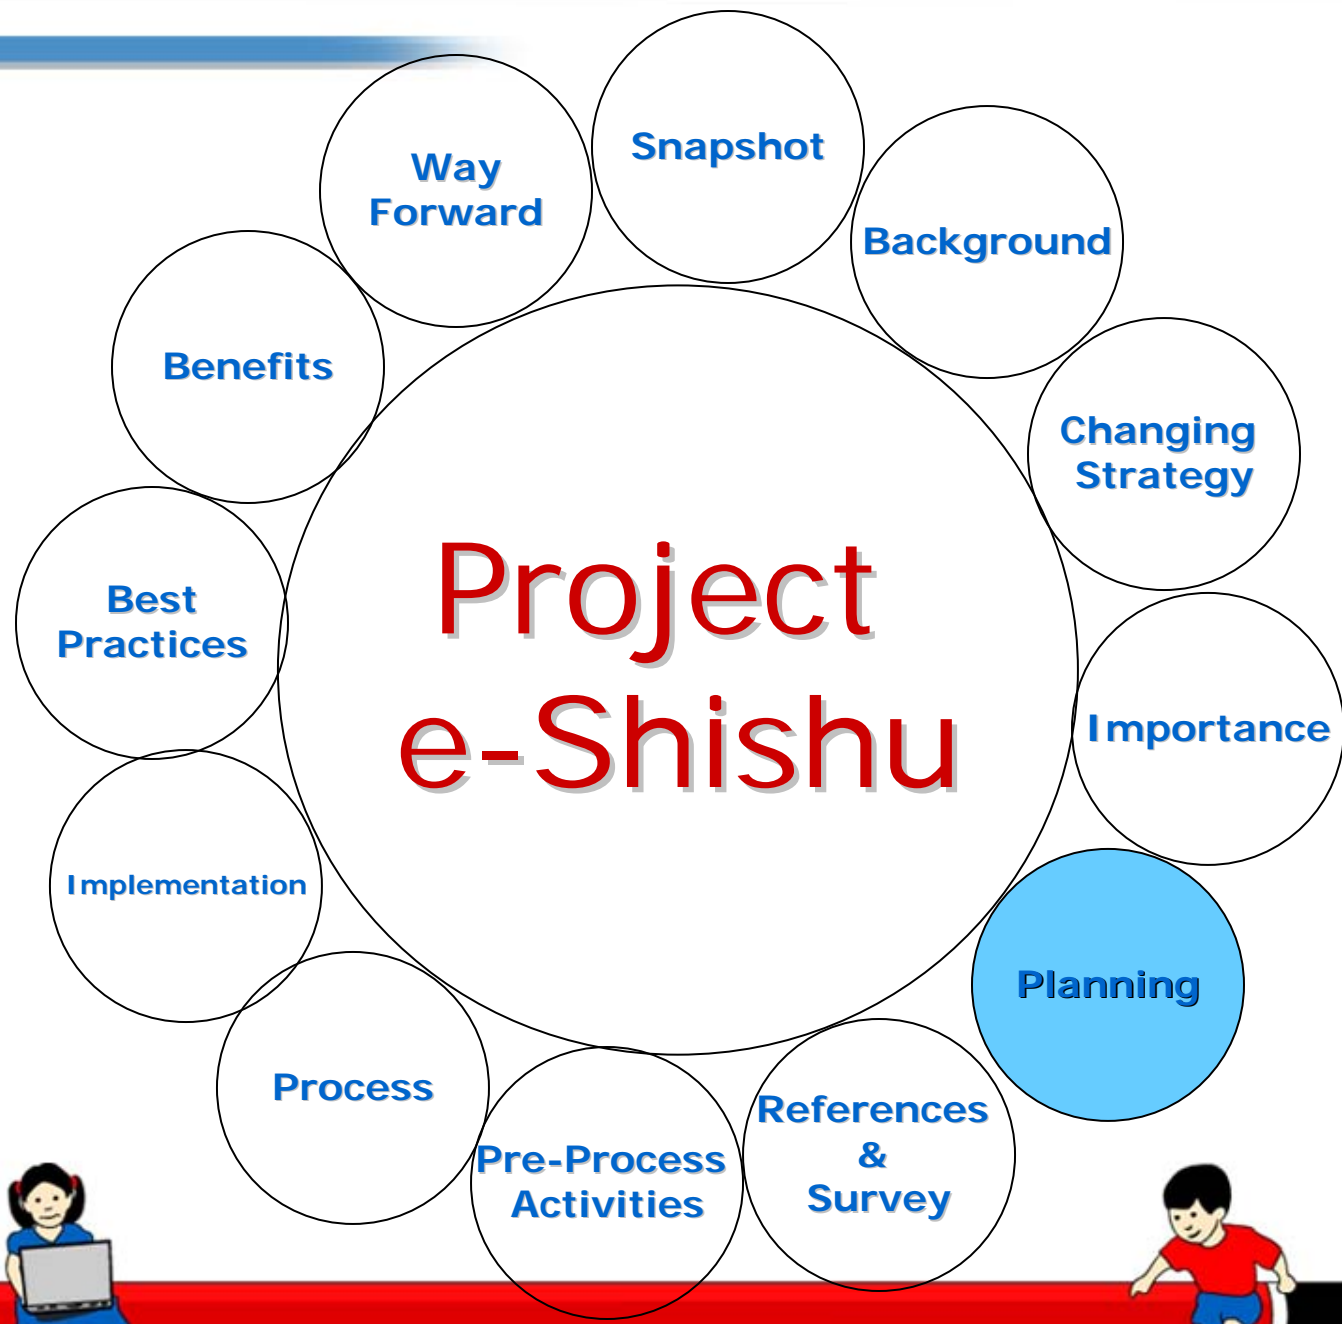

In nutshell: - To strengthen the **three PILLARS** of the education system.

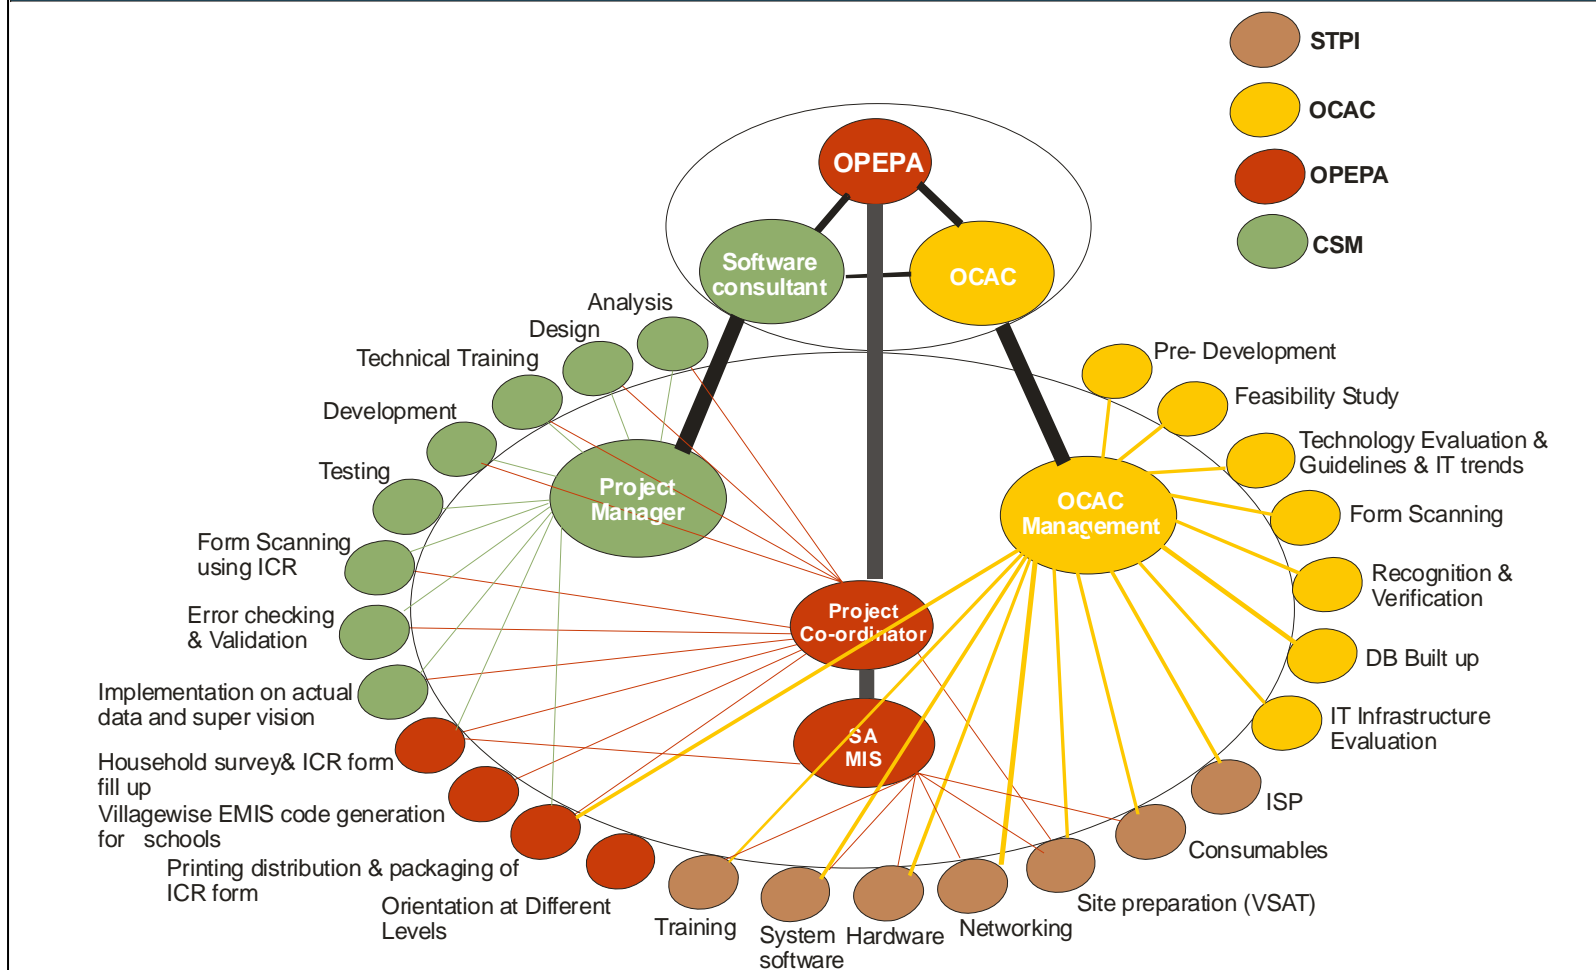

# Project e-Shishu

Project e-Shishu

# Administrative Structure for Implementation of e-Shishu

# Planning...

- **Involvement of Stakeholders**

- Project conceiving with Honorable Minister for School & Mass Education during Assembly Session, 1st week of August'2005.
- Appeal writting by Honorable Minister wrote an to all public representatives starting from word members up to Honorable Members of parliament (nearly 1 Lakh letters) to
  - generate awareness
  - requesting for participation
  - whole hearted support to the campaign.
- Designing draft format and circulation to
  - All collectors
  - District Project Coordinators of SSA
  - District Inspectors of Schools
- Teleconference held on 2nd September with 1050 stakeholders from various institutions; the objective being:
  - the process of implementations
  - Discussion of each item of the format.
- Developing training module to:
  - impart training to each and every stakeholder of the project
  - Detail instructions were given with respect to each and every activity of the entire process.

- Data collection

- Prioritizing on the form fields
- Codification for maximum number of fields to avoid errors.
- Planning on Printing, distribution, collection and data capture.
- Deciding on technology to be used to extract data from the form in less time with least error.
- Scheduling preparation for data collection and validation.
- Team forming for monitoring the data collection and validation.

- Infrastructure Built-up at Offices

- Identifying proper IT infrastructure in all the district head quarters for data updating.
- Decision-making on suitable servers, connectivity and Management for the same.
- Skill set required for managing the IT infrastructure at district level.

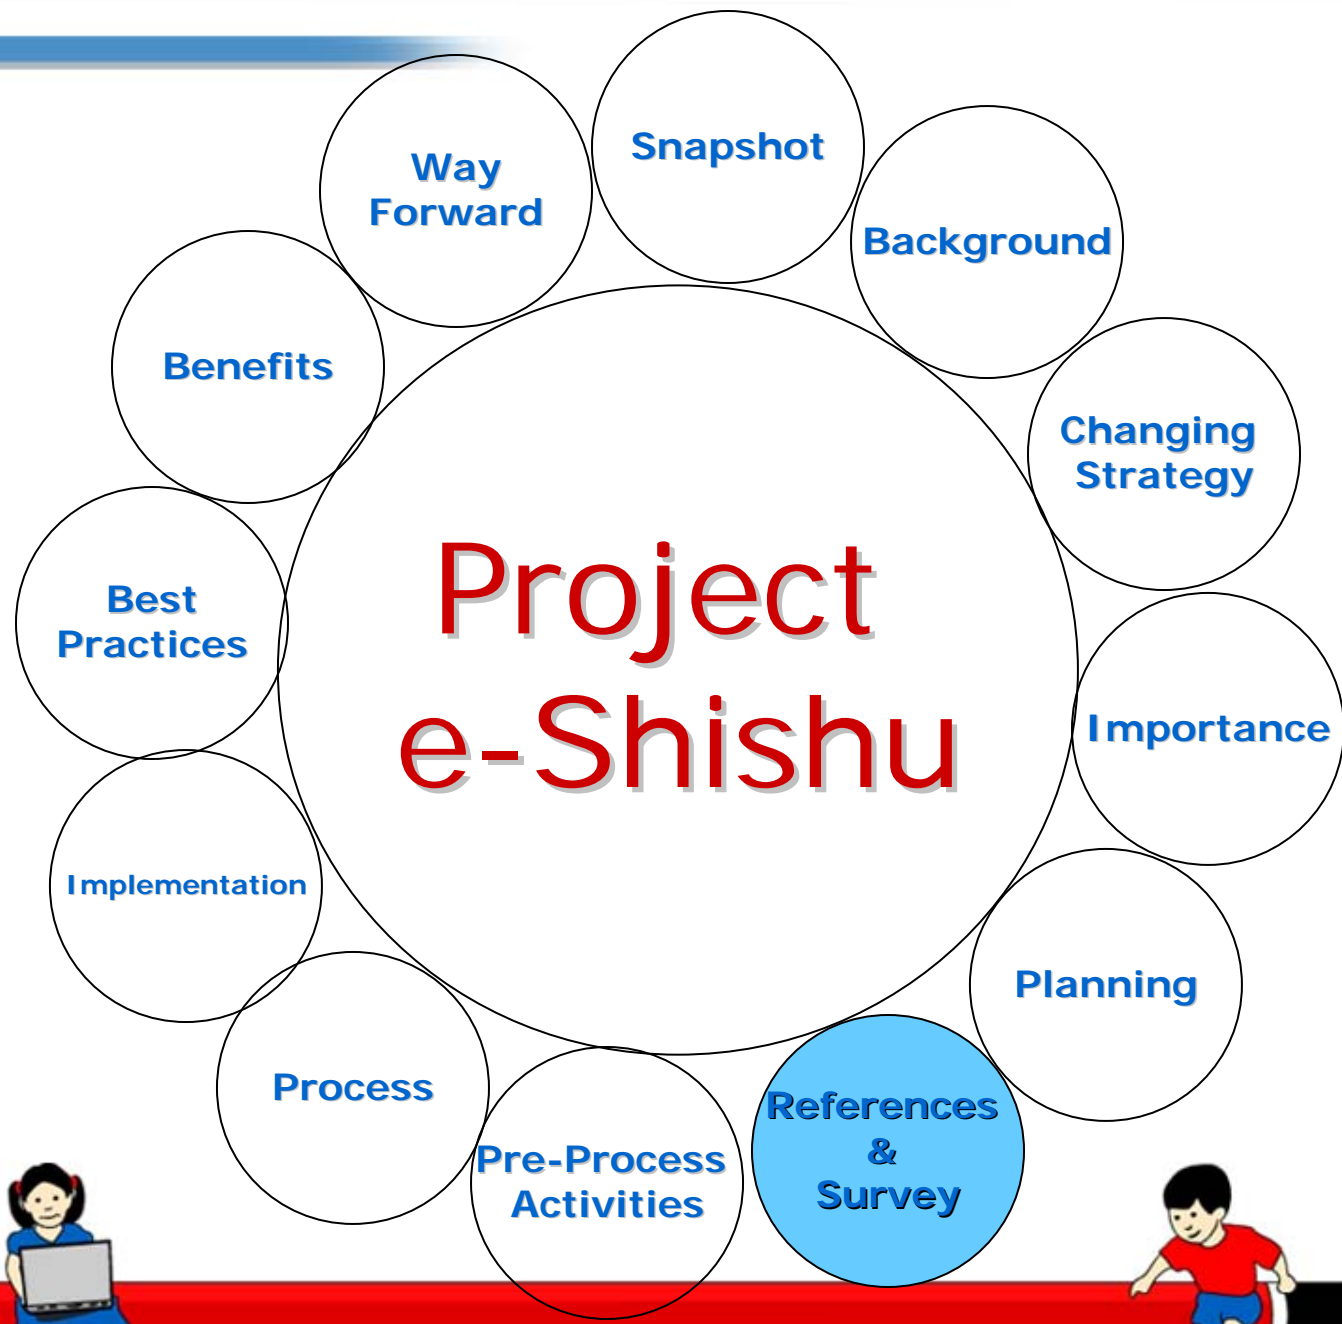

- VSAT Connectivity

- Identifying the Connectivity of District offices with the main server at state office which was a major requirement.
- Discussing and deciding the Infrastructure requirement for the connectivity on setting up of VSAT in each district and the State office.
- Preparing the Field Survey schedule for VSAT implementation.
- Finalizing the Team formation for Field survey and VSAT implementation.
- Finalizing the Schedule for implementation of VSAT in the districts.

# Project e-Shishu

Project e-Shishu

# References & Surveys...

- Key elements
  - The District planning Coordinator collected the **polling booth wise voter list** in advance, which was distributed to the Block Resource Group (BRG) Members.
  - **The GP/Ward wise mapping** of all schools/EGS centers and the School Code, covered under DISE. The concerned SI of School then identified all the left out - formal/ non-formal & recognized/ un-recognized institutions/schools with respect to the DISE School Code list.
  - Development of EMIS code

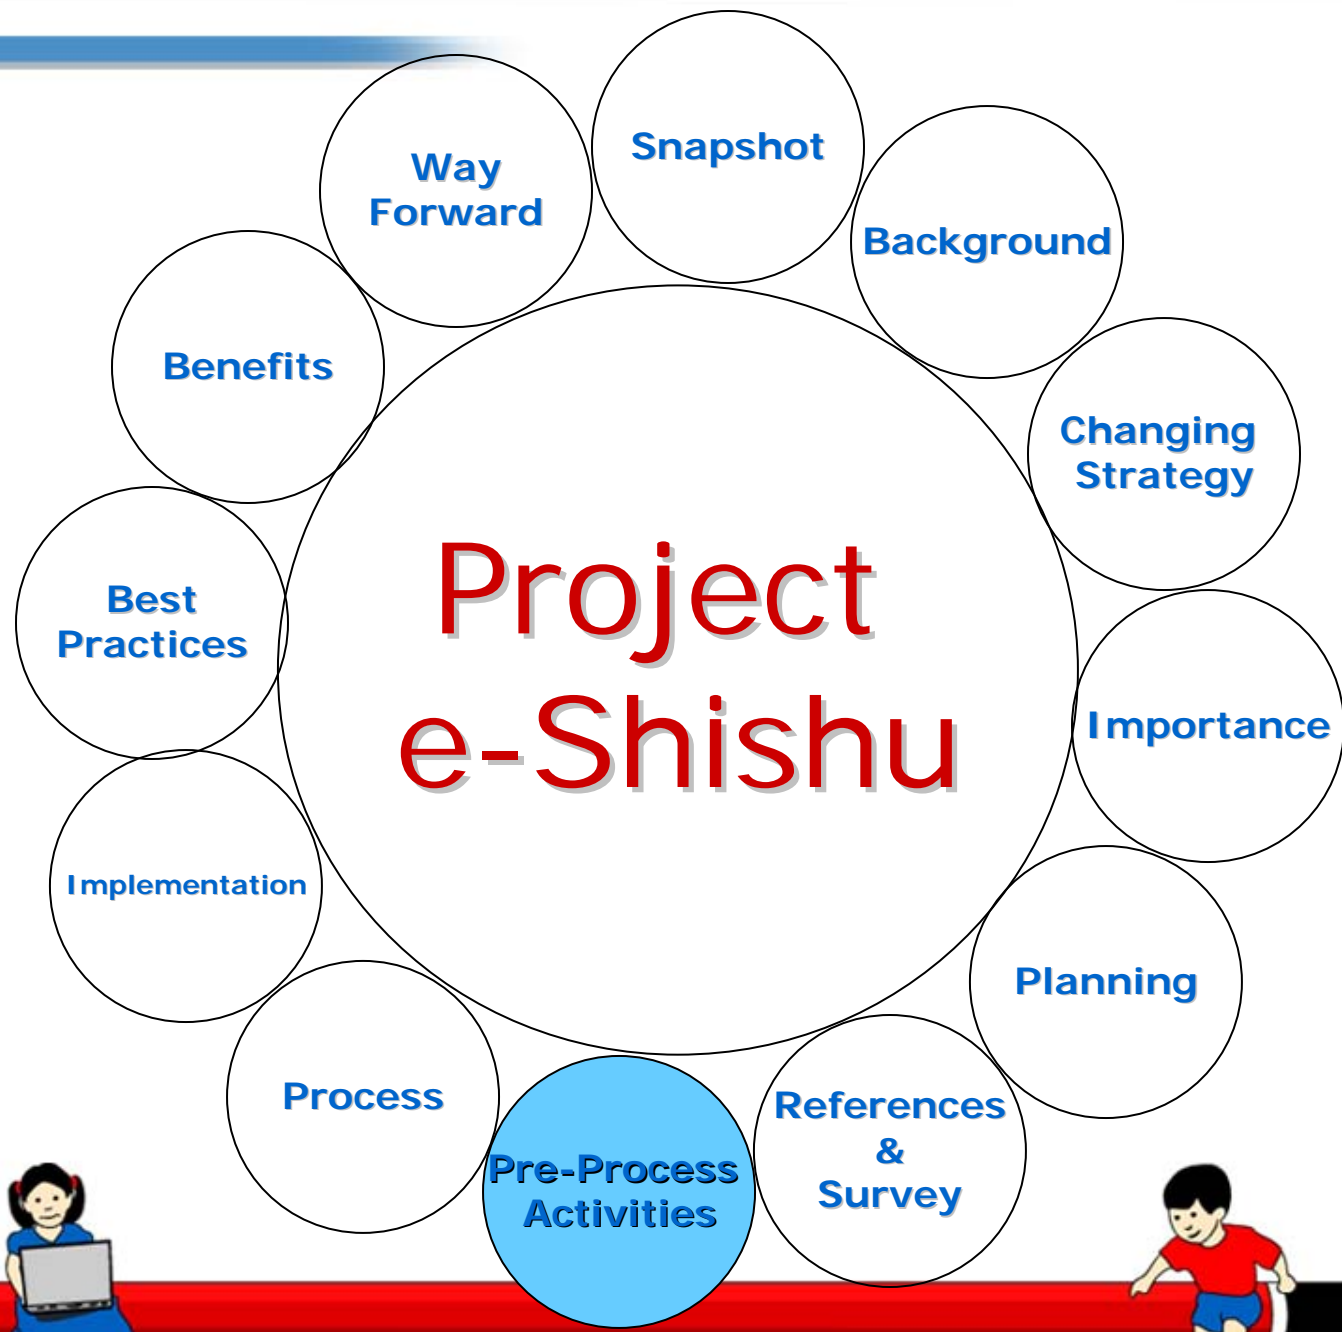

## • Study Surveys

- The Block Resource Group was responsible for the survey for **finding the distribution of pooling booth wise voter list**, finalization of EMIS Code for all the formal/ non-formal & recognized/ un-recognized institutions/schools and training to the Enumerators.
- District Resource Group was responsible for **the finalization of the block wise survey** schedule, distribution of pooling booth wise voter list, finalization of EMIS Code for all the formal/ non-formal & recognized/ un-recognized institutions/schools and training to the BRG Members
- Survey was done in all the 30 districts by experts to get a clear picture on the **availability of proper environment to set up VSAT**. After a 7 days survey of all the 30 districts, the plan was made for installing Servers, VSAT. For VSAT installation lightning arrester and power earthing was also surveyed. Further the voltage fluctuation and the network status of district office computers were also surveyed.

Project e-Shishu

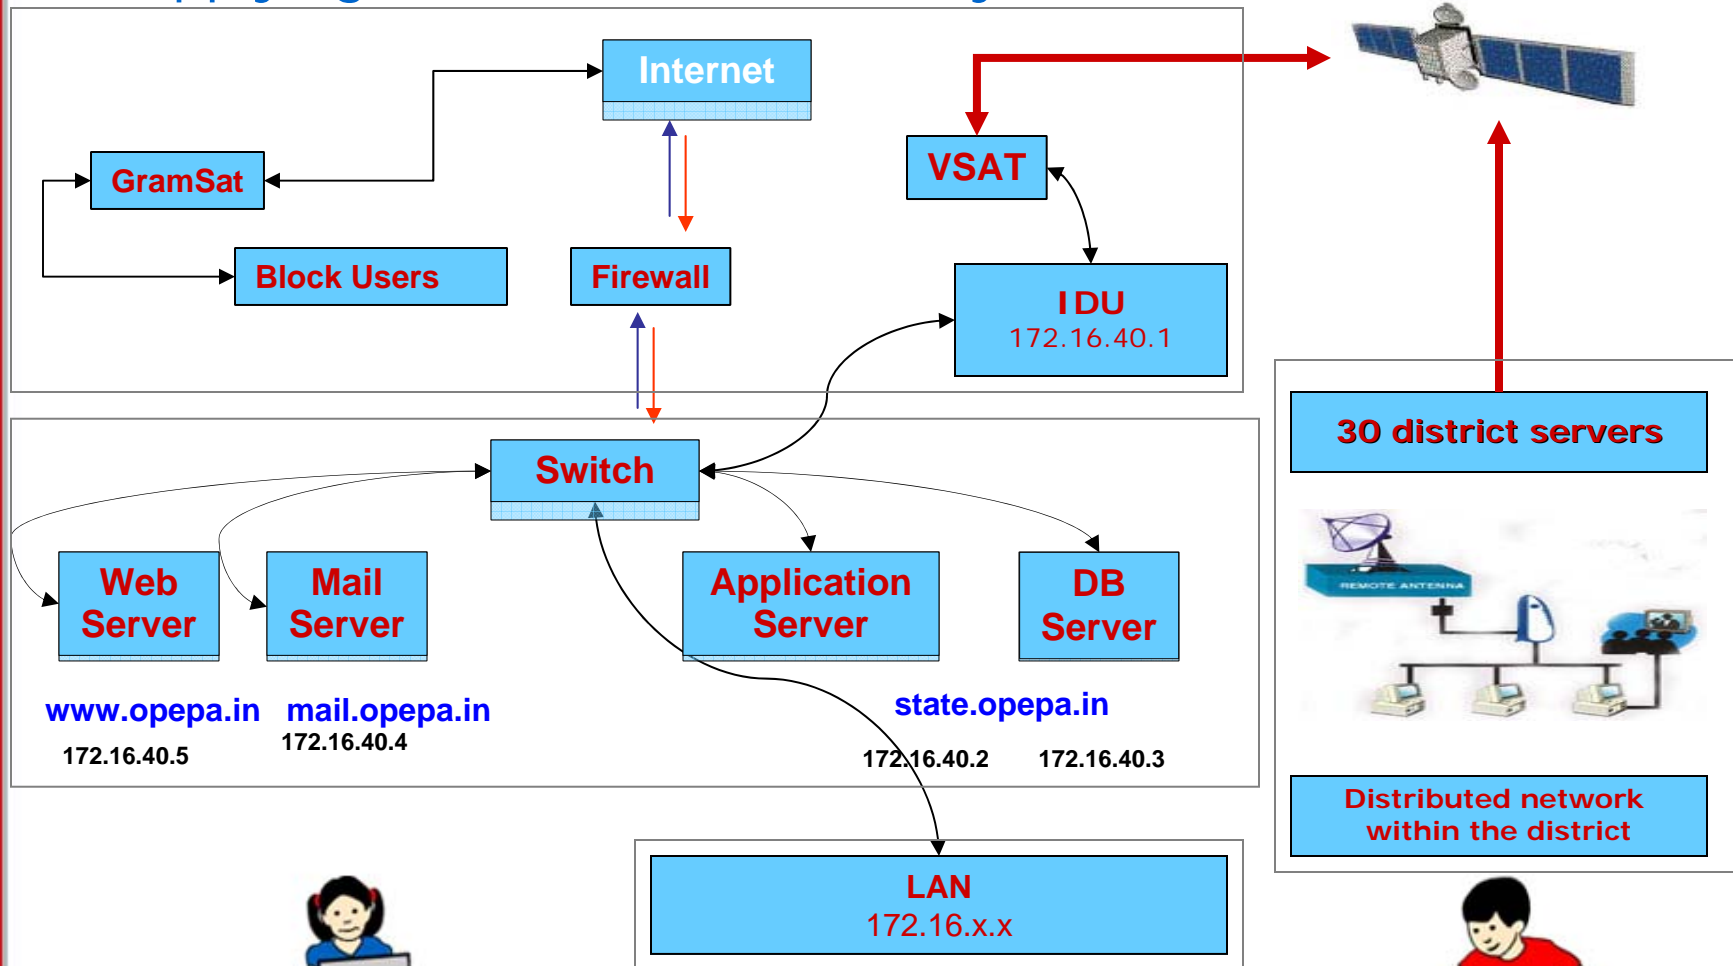

# Project e-Shishu

Project e-Shishu

# Pre-process activities...

- Supplying Services - Connectivity

Project e-Shishu

- Supplying services – Front/Back office Operations
  - Every district office across the state required to be equipped with high-end servers and proper infrastructure to manage the child data for that particular district.
  - As the volume of the data is very huge, it was decided to have a centralized implementation but decentralized architecture. That means each district office will update the data at the district server and those data would be consolidated in a regular interval of time.
  - Also planning on the software development for the data management was done.

- Middleware

- As the data related to child information was to be made public, the business logics were stored in the middleware. Proper security procedures were followed to ensure that no data is lost. Also planning was done on how the search reports can be made user friendly and selection of the data that are to be made public.
- The control mechanism through which the district users would update the data was also analyzed carefully

# • Change Requirement

- **Citizen Access:** Any data related to Child as well as Household required to be made open to citizen to view. Website is the best medium to show these data to the citizen. So the data was required to be made public through OPEPA website . People could see the reports and search by query.
- **Organizational changes:** Skilled people who can manage the entire system were identified and given the responsibilities. Different resource groups were also created to monitor the entire process at state, district, block and village level

# • Capability Requirements

- **Training:** Proper training at different stages was required for the people who will work on the project. So training session at State as well as District, Block and Village level were required to be conducted.
- **Infrastructure:** The existing infrastructure was also required to be upgraded. Each Districts need to be connected to the state office so that the information can flow in time and in an efficient way without any hassle.

Pre-Process Activities

Project e-Shishu

# Process...

**Project e-Shishu**

## • Pre-survey activities

- Finalization of EMIS code
- Finalization of Non-ICR forms
- Training schedule
- Team/Resource groups form for Supervision of the entire process
- Awareness among the stakeholder on the project
- Preparation of list of Govt., EGS/AIE Centers, Pvt. Recognized Schools and Pvt. Unrecognized Schools.
- EMIS Code Generation of village wise schools by unique 7 digit code.
- Pre-Survey of households on basis of Voter list to estimate the number of non-ICR sheet required.
- Printing of Non-ICR sheets

- Training

- State level training to the District Programmers on EMIS Code generation
- State level training to the State resource Groups
- District Level training to the District Resource Groups
- Block Level training to the BRCCs and CRCCs.
- Training at village level to the enumerators.

## • Form Distribution

- Forms were distributed to district head quarters from the state HQ.
- From District, the forms were distributed to the blocks.
- Distribution of Forms to the Enumerators from the Block Office.
- Proper record keeping of the forms distributed to the enumerators.

## • Household Survey

- Household survey by the enumerators.
- Filling up of household and Child data on the Non-ICR forms
- Data validation
- Collection of the Non-ICR forms at the Village/Ward, Block/ULB, District level.

Project e-Shishu

- **EMIS Code Generation**

- EMIC code was generated for each village.
- This list was supplied to the enumerators who were identified to fill up the ICR forms.

- **ICR Form Fill up**

- Out of 40000 Enumerators who were involved in the household survey, few of them were identified for filling up of ICR forms.
- Proper training was given to them at Block/ULB before they fill up the data.
- Supervisors were appointed at each locations to ensure that the forms are filled up correctly by the enumerators.
- Forms were validated by the supervisors and reentering of the forms were done if found errors.

Project **e-Shishu**

## • Transportation of ICR forms

- The filled up ICR forms were first collected from each locations at the block level.
- They were then put in packets. Each packets contain 500 ICR sheet GP/Ward wise.
- If any GP/Ward has more than 500 Sheets those were indexed properly.
- All GP packets are consolidated and packed in cartons for each Block.
- All packets were marked properly so that it will help in scanning process.
- All the packets are sent to the scanning location at Bhubaneswar.
- After the scanning process is completed they were sent back to the respective district offices

## • Scanning, Recognition and Verification

- After receiving the ICR forms from the districts, a list was prepared and crosschecked with the master data (GP/Ward no and Block Name) in the EMIS Code List.
- 5 High-end Scanners were engaged for scanning purpose.
- Nearly 2 Lakh ICR forms were scanned per day.
- After scanning those forms were recognized by ABBYY form reader software.
- The recognized data were first verified manually before transferring to the database.
- The verified data were consolidated and exported to the district database using customized software.

## • Data clean up and consolidation

- The exported data were first cleaned up to remove any garbage entry. This was done by another software.
- Once the garbage data is cleaned up, the data was verified by special made software and the error reports were generated.
- The district data then consolidated and transferred to the state database server.

## • Error Correction

- The error generated from the ICR forms are corrected with the help of the District programmers.
- Proper training was given to the district programmers on error correction.
- The scanned images of the original ICR forms were also provided to get a clear picture on what data was filled up on the ICR Sheet by the enumerators.

- Reports Generation

- While the data was being collected, scanned and verified, the reports required for OPEPA were developed using some dummy data.
- Once the Data was consolidated district wise, the reports were checked and further enhancements were incorporated.
- Special reports were then designed that can support in decision making

# Project e-Shishu

Project e-Shishu

# Implementation...

- Application Development
  - Requirement gathering for the project
  - Architecture design
  - Development of Child Tracking System
  - Development of Error Tracking/Correction Software.
  - Deployment of the application in State as well as District application servers.
  - Utilities Development for data consolidation at state level.
  - Software development for Integration of GIS data of the schools.
  - Software development for integration of teachers information.

# Project e-Shishu

## • Infrastructure Development

- State Level planning on the infrastructure requirements for the project.
- Procurement of State Servers and District Servers.
- Procurement of VSAT.
- Survey for VSAT installation at State HQ and 30 districts.
- Site visit for Earth Insulation, Power Earthing for VSAT.
- VSAT installation at all 31 locations.
- Installation of Servers at all districts.
- Connection of all the district server with the state server through VSAT connectivity

Project e-Shishu

## Best Practices...

- Updation of Child Data at Block Level
  - Currently, information related to Child, Household and Schools are updated at the District level. Now the Blocks can be connected to the OPEPA network and data can be updated at the block level.
  - For this the Block users can access the application through GRAMSAT.

# Best Practices...

- Generation of Unique House Hold ID and Child ID:
  - Similar to EMIS code for Schools, each households have been given a unique number (9 digits). From this number one can easily track the physical location of the household. Also the type of family (like general family or houseless family) can be tracked. This number is unique in the entire state so there is no chance of duplicate HMIS code.
  - Each child in the state has been given a unique key. This unique key contains the location where the child residing also gender and other things. This unique key can be used by other agency so that a standardization will be followed and will help in getting many information from a single number. If any survey is planned to happen in future this keys can be used to get maximum information and only the required information can be surveyed.
  - Both these ID's are under process for standardization.

Project e-Shishu

# Benefits...

- The benefit of this project would be mostly in planning activities under various interventions to achieve goals of SSA and meet the challenges of Universalization of elementary education .
- Second major benefits would be to plan specific action for the out of school children based on the reason for their being out of school. Instead of dealing with numbers ,we have names and individual to deal with.
- Third major benefits would be to plan for future entrants to the education system with infrastructure ,teachers etc. in years to come.
- Duplicate and fake enrollments which are quiet common in government schools due to several incentives like books, MDM, uniforms could be minimized/eliminated altogether
- Most important benefit would be development as a tracking system for each child based on his /her achievements and taking steps to improve the same so as to achieve the objective of quality education.
- Decision with regard to starting up of new schools or EGS (Education Guarantee Scheme) Centers or AIE (Alternative & Innovative Education) centers shall be taken at District and sub-District level based on the number of out of school children. Similarly, appropriate action shall be taken for each child out of school there by achieving goals of UEE.
- Decision with regard to providing infrastructure or posting of teacher can be taken at the appropriate level. Once such decision is implemented, the same can be updated at the local level and up linked to web.

Project e-Shishu

# Way Forward...

- Integration of GIS data with existing EMIS code.
  - With this we can map each and every school up to secondary level in the state with respect to infrastructure along with latitude longitude reading with GPS survey.
  - This will help in getting information related to school infrastructure, schools available with a specific diameter, connectivity to the school etc. This will help in decision making for establishment of Primary, upper primary schools and EGS/AIE Centers.
- Integration of teachers information with the existing database.
  - Information related to existing teachers and their posting can be accessed from the website itself.
  - Decision with regard to providing infrastructure or posting of teacher can be taken at the appropriate level.
